

# APPLICATION Security TRAINING

## Our most popular application security training courses:

- Application Security Requirements
- Application Threat Modeling
- Secure Web Development
- Secure Software Development (C/C++, C#, Java, and others)
- Web Application Penetration Testing

Application security attacks can be **devastating to the bottom line and reputation** of any organization, and they are **on the rise**. Despite the very real risk of a cyberattack, many leaders feel their organizations are not a likely target. Software security planning and training are not a priority for them, so they allocate very little budget—if any—to proactive application security measures. If this sounds familiar, you may be **underestimating the risk of a cybersecurity incident** on your organization.

EVERY **14** SECONDS

The costs incurred when an organization falls victim to a cyberattack can be staggering: from direct costs like forensic analysis, remediation, and legal fees, to the indirect costs such as lost revenues due to brand reputation damage and incremental expenses like regulatory and legal fees. It can take years to recover—and some organizations never do.

You can cost-effectively protect your organization from a cyberattack. **Application security training is known to be one of the lowest-cost initiatives with a high return on investment for cyberattack preparedness.**

SysLogic's application security training will arm your software developers with the skills and expertise they need to secure your applications and protect your organization from a costly cybersecurity incident.

Led by SysLogic's team of application security experts, our courses help your software developers and architects learn how to implement effective safeguards against cyberattacks.

## ABOUT SYSLOGIC'S APPLICATION SECURITY COURSES

- **Customized instructor-led training** covers best practices and industry standards. Tailored to fit your specific needs, including education and promotion of internal policies and procedures.
- **Interactive classes** encourage practical application and retention of skills through active attendee participation, open Q&A sessions, hands-on labs, and assessments.
- **Full-service management**, coordinating all aspects of the training including scheduling resources, tracking attendance, and administering assessments. We can also work with your existing learning management system.
- **On-site at your location**, interacting directly with your attendees, with **remote connectivity options** for participants in other locations.

It's not too late to protect your organization from a cyberattack. Contact us to **learn more.**
